B. F. Goodrich Chemical Co.

## STOPS WINTER BURN

**Retards evaporation from leaves while transplants are establishing new roots. Minimizes wilting and resulting setback to plant growth.**

- Permits transplanting any time of year
- Can be used as a spray or a dip
- Will not harm plant tissues
- Long-lasting, forms transparent film
- Reduces water loss through foliage
- Has no toxic effect
- Simple and convenient to use
- Actually enhances appearance
- Almost invisible
- Retards winter burn

PLANTECT can be applied any time when atmospheric conditions will allow it to dry fairly rapidly. When PLANTECT is dry, it is transparent. Temperatures of 70° or higher are ideal but satisfactory results can be obtained at much lower temperatures. When PLANTECT is used indoors, drying can be hastened by artificial heat and the use of fans.

**HOW TO APPLY —** PLANTECT can be sprayed or dipped, whichever is most convenient. Use any type of pressure sprayer. Care should be taken to get complete coverage.

For transplanting evergreens — Use one part PLANTECT to 4 parts water.

For transplanting deciduous shrubs and trees — One part PLANTECT to 6 parts water.

For rooted cuttings from greenhouse and beds — One part PLANTECT to 8 parts water.

For deciduous stock for storage — One part PLANTECT to 1 or 2 quarts water.

**CAUTION:** Clean sprayers carefully with water after using PLANTECT. Spray equipment, especially hose, pipes and nozzles, are likely to clog if not flushed out with water at least once daily. PLANTECT should never be left in sprayer over night.

## SELF-SERVICE IN THE SALESGROUND

Your own customers have learned to like waiting on themselves to save money, in Supermarkets, would like the same privilege in more Super-Nurseries. have more soon! Inquiries, requests, for Self-Service Carts ar in from Nurseries all over the Country. (Many will have converted to Self-Service by February, 1956.) To help you meet this challenge, here are

### TWO MODELS — SALESGROUND SHOPPING CARTS

MODEL A-L is offered to meet the need of many Nurseries for numerous small carts. Customers wanting to buy only 4 or 5 plants-in-cans (or other containers) should not have to wait for a cart—nor 'tie-up' a big cart.

This model folds up to save space in winter storage. Six carts fold into space used by one only open cart. Baskets for small items (hand tools, seed packets, bulbs, etc.) will be available for this cart if requested at extra cost. Cardboard boxes, if kept handy to the carts, would serve as well for small item pick-up, and would be necessary for customer's pick-up of Bedding Plants!

MODEL A-L is as nearly like market shopping carts as a carrier for Nursery items can be. It's light and easy to handle—will induce customers to wait on themselves.

This model is best choice for Nurseries with narrow walks—little parking space. Or for large Nurseries which have a short but heavy selling season—then must store their carts the rest of the year.

5 carts nest in a space 7 ft. x 2 ft.

5 carts fold for storage in a space 24x40x30" high.

Model E-B has been in Nursery Self-Service since September, 1953, Designed by Gordon Courtright of East Day Nursery, Berkeley—manufactured by Ayer-Line since January, 1954. Many units now in use, are proving that Self-Service can be just as practical for the Nursery, in this day of packaged living plants, as it is for food stores.

The MONROE NURSERY has recently been appointed as sales agent—and is proud to offer this fine cart to its customers. It can't be beat for easy rolling of heavy loads! Many owners 'borrow' it from Self-Service sections of their Nurseries—to tote large heavy items. Its basket is now made removable, to clear entire bed surface, for this use.

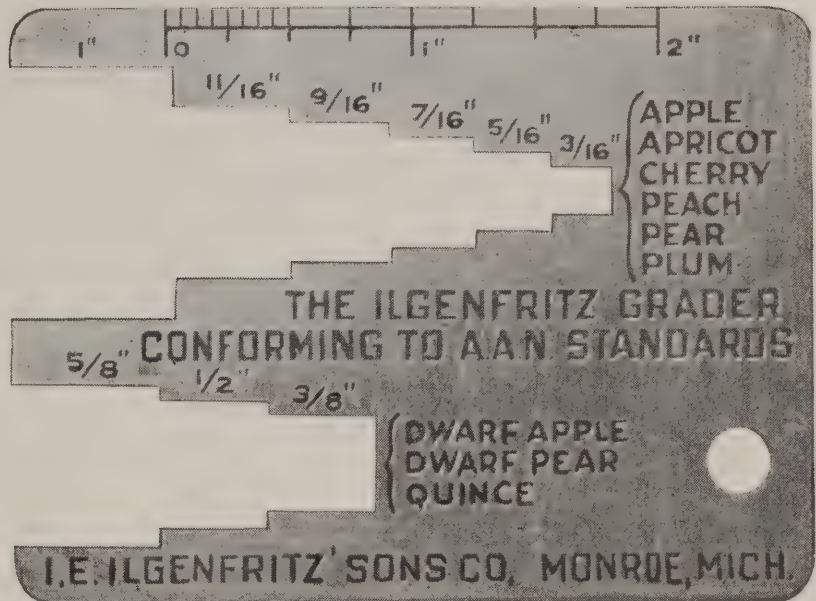

MODEL E-B is built to take rough handling, for years, and to carry heavy loads. This model is best choice for Nurseries having plenty of space, both for parking carts, and in aisles, for carts to pass each other. Also best model for a Nurseryman's own use — it will tote very heavy items.

3 carts nest in a space 6 by 2½ ft.

PLANT NUTRITION AND SOIL IMPROVEMENT

IT IS WELL KNOWN that the average acre of nursery stock must produce from ten to twenty times the cash return expected of an acre of average farm crops. Of first importance in realizing these returns is intelligent soil management and efficient use of fertilizers.

THE RESPONSE OF CROPS AND SOILS TO FERTILIZERS AND MANURES

W. B. Andrews

The compilations of many years of experience are concisely presented in this valuable book. All types of fertilizers, manures and plant food elements are considered, practical example of their uses are given, and carefully prepared conclusions are offered. Easily understood, practical and interesting to read; this book contains essential information on soil and crop improvement for the grower.
